

COMPANY POLICY

RAG KNOWLEDGE BASE DOCUMENTATION

A structured company-policy knowledge base designed for a Retrieval-Augmented Generation (RAG) application.

Important: This is a professional template. Replace organization-specific policy values with the company's officially approved policies before production use.

1. Company Overview

This knowledge base provides structured information about company policies, workplace practices, employee responsibilities, communication, security, leave, attendance, and related procedures. It is intended for employees, interns, trainees, and other authorized personnel according to each policy's scope.

2. Workplace Policy

The company may use office-based, remote, or hybrid working arrangements depending on role requirements, team schedules, manager instructions, and business needs. Employees are expected to follow their assigned schedule and remain available during agreed working hours.

3. Hybrid Work

Hybrid work means working from a combination of approved office and remote locations. The exact schedule should be confirmed with the relevant manager or team. Changes to the agreed schedule require appropriate approval.

4. Remote Work

Remote work is subject to role suitability, approval, operational requirements, and information-security standards. Employees working remotely must maintain reliable communication and a suitable working environment.

5. Working Hours & Attendance

Employees should follow their assigned working schedule, be punctual, remain available during working hours, and complete assigned responsibilities. Attendance records should accurately reflect working days, approved leave, and approved remote-work arrangements.

6. Breaks

Employees may take reasonable breaks according to company practice and applicable requirements. Breaks should not unnecessarily affect meetings, customer commitments, or team operations.

7. Late Arrival or Absence

When an employee expects to be late or absent, they should notify the relevant manager or HR contact as early as reasonably possible and follow the company attendance procedure.

8. Leave Policy

Leave should be requested through the designated company process. Requests may require advance notice and approval. Submitting a request does not necessarily mean that leave has been approved.

9. Annual Leave

Employees may request annual leave according to the company's approved annual-leave entitlement and approval process. The official policy should define entitlement, carry-forward rules, notice requirements, and approval authority.

10. Sick Leave

Employees unable to work because of illness should notify their manager or HR according to company procedure. Supporting documentation may be required where applicable.

11. Emergency Leave

Emergency leave may be requested for unexpected personal or family situations requiring immediate absence. The employee should notify the relevant contact as soon as reasonably possible.

12. Intern & Trainee Policy

Interns and trainees must follow applicable attendance, communication, confidentiality, security, and professional-conduct requirements. Their schedules, reporting lines, deliverables, and evaluation criteria may be defined separately.

13. Code of Conduct

All personnel are expected to behave professionally, respectfully, and ethically. Harassment, intimidation, discrimination, abusive behavior, deliberate disruption, and misuse of company resources are not consistent with professional workplace conduct.

14. Communication Policy

Work communication should be clear, professional, and appropriate to the channel. Official channels should be used for work-related matters. Required meetings and status updates should be handled according to team procedures.

15. Status Updates & Meetings

Teams may use daily or periodic updates to communicate completed work, current tasks, blockers, and next steps. Employees should attend required meetings on time and notify the organizer when attendance is not possible.

16. Information Security & Confidentiality

Confidential information must only be accessed, stored, shared, or discussed for legitimate business purposes and with authorized persons. Sensitive company information should be kept in approved systems.

17. Passwords, API Keys & Credentials

Passwords, API keys, tokens, and access codes must not be publicly shared or committed to source-control repositories. Credentials should be stored using approved secure methods.

18. Acceptable Use of Technology

Company devices, accounts, networks, software, and other resources should be used for authorized purposes. Users should not bypass security controls, install unauthorized software, or use company systems for unlawful activity.

19. AI & Data Use Policy

AI tools may be used only according to approved company processes. Confidential, personal, proprietary, or restricted information must not be entered into external AI services unless that use is explicitly authorized. AI-generated output should be reviewed before important business use.

20. Performance & Responsibilities

Employees are responsible for completing assigned tasks, meeting agreed deadlines, communicating blockers, maintaining work quality, and following team processes. Managers may define role-specific objectives and evaluation criteria.

21. Health & Safety

Personnel should follow applicable workplace health and safety requirements and promptly report hazards, accidents, or unsafe conditions through the designated channel.

22. Expenses & Company Property

Business expenses should be work-related, reasonable, properly documented, and submitted through the approved reimbursement process. Company property must be handled responsibly and returned when required.

23. Conflict of Interest

Employees should disclose situations in which personal interests could conflict, or appear to conflict, with their responsibilities to the company. Potential conflicts should be discussed with the appropriate manager or HR representative.

24. Grievances & Reporting Concerns

Workplace concerns should be raised through the appropriate manager, HR representative, reporting channel, or other designated process. Reports should be made in good faith and handled according to company procedure.

25. Resignation & Separation

Employees who resign should follow the notice and handover requirements applicable to their employment agreement and company policy. Company property, credentials, documents, and assigned resources should be returned or transferred as required.

26. Policy Changes & Version Control

Company policies may change because of legal, operational, business, or organizational requirements. The latest approved version should be treated as authoritative. Older versions should be archived or clearly marked as superseded.

27. FAQ

Q: What does hybrid work mean? A: Working from a combination of approved office and remote locations.

Q: Who approves leave? A: The designated manager or the applicable company leave process.

Q: What if I cannot find an answer? A: The RAG assistant should state that the information is unavailable in the current knowledge base and direct the user to the appropriate policy owner or HR contact.

Q: Can company data be entered into an AI tool? A: Only when that use is explicitly authorized by company policy.

28. RAG Knowledge-Base Metadata

Each document/chunk should ideally contain policy_name, department, scope, version, status, effective_date, and source. Metadata supports filtering, source tracking, version control, and access control.

29. Recommended Knowledge-Base Files

company_overview.txt; workplace_policy.txt; attendance_policy.txt; leave_policy.txt; intern_policy.txt; code_of_conduct.txt; communication_policy.txt; security_policy.txt; acceptable_use_policy.txt; ai_policy.txt; resignation_policy.txt; faq.txt

30. RAG Answering Rules

Answer only from retrieved and approved policy content. Do not invent policy values, dates, leave balances, working hours, or approval rules. Respect employee/intern scope. Prefer the latest approved version. If information is absent, say so clearly. Where possible, identify the supporting policy/source.

31. RAG Pipeline

Documents → Load → Clean → Chunk → Embeddings → ChromaDB → User Query → Query Embedding → Similarity Search → Relevant Context → Gemini/LLM → Grounded Answer. The indexing stage prepares documents; the query stage retrieves relevant chunks and generates an answer.

32. Final Summary

This document provides a structured foundation for a company-policy RAG knowledge base. The organization’s approved policy documents should be maintained as focused files, ingested into the vector database, retrieved in response to questions, and supplied to an LLM to generate grounded answers. Policy owners should review and approve all policy content before production use.
